MICROGUARD 95 Filter elements

- 95% efficiency on 0,3µm particles (DOP) -

for hospitals, pharmaceutical, food processing, precision manufacturing and high rise construction, . . .

MICROGUARD 95 filter elements deliver particulate free clean air – 95% efficiency an 0,3 micron particles (DOP). They offer the ultimate quality in design, construction and performance. The product successfully removes toxic dust, pathogenic organisms and many other sub-micron particulate to provide a contaminate free working environment.

This filter is ideal for many HVAC systems or other applications where particulate free air is required, but which do not call for the efficiency, cost or air flow restrictions of HEPA or ULPA filtration.

The Microguard 95 filter is designed with a glass fiber filter media and housed in a variety of enclosure frames including fire retardant particle board, galvanized metal and stainless steel.

The use of aluminium separators provides higher filter efficiency through the very high ratio of filter area to face area.

The high efficiency air filter utilizes our unique safety edge aluminium separator design. This feature insures filter pack stability while in operation and protects against any media puncture during handling, installation and operation.

Each MICROGUARD 95 media pack is completely

encapsulated in a specially developed sealant to insure absolutely no leakage around the filter media – no pack to frame leaks are present in this high performance product.

The filter elements are offered with enclosed frames of fire retardant paricle board, galvanized steel (either 16 gauge or 24 gauge) and stainless steel. The products are offered in a conventional box style or with single or double header configurations. Virtually any frame work design can be accommodated with Microguard 95.

MICROGUARD 95 elements furnished with gaskets as required (upstream, downstream or side access) and are available with face guards (front, rear or both sides).

- Guaranteed and individually certified, minimum efficiency of 95% on 0.3 micron particles and 99% efficiency on atmospheric dust (ASHRAE Standard 52-76).
- High ratio of filter surface area to face area provides a highly efficient yet compact air filter.
- Delivers 50 fpm face velocity at 0.95" W.G. allowing for use in many air systems and simple conversions of existing applications with no costly framework modifications.

- Schutzvermerk nach ISO 16016 – Protection notice as per ISO 16016 -

Datasheet

Standard MICROGUARD 95 series

Model number	Dimensions in mm H x B x T	Capacity in m³/m²/h				
		50 Pa	100 Pa	165 Pa	240 Pa	340 Pa

Remarks:

1. Model number refers to the standard fire retardant particle board cell size with box style (no header) construction.
 - a. For cell size of 16 gauge galvanized modular box style construction, add suffix MC (e.g. LDM-811-MC).
 - b. for cell size of 24 gauge galvanized modular box style construction, add suffix ML (e.g. LDM-811-ML).
 - c. For cell size of 24 gauge galvanized with perimeter header, add suffix MH (e.g. LDM-811-MH).
2. The "H" dimension (height) indicates the direction of the separators.
Micorguard 95 filters are recommended for installation with the separators in a vertical position.
3. The recommended final change out point for Microguard 95 filter is 500 Pa on 292mm deep units and 400Pa on units less than 292mm of nominal depth.
